Smart Interview Platform

Product overview for partners, October 2026

Introducing the interview system

The platform interviews job applicants online, by voice and video, in real time. Applicants first upload their résumé; the system reads it, compares it with the open positions and suggests the ones that fit their skills. Once an applicant picks a position, the interview starts: the questions are written for that position, the answers are spoken, and every answer is scored against the same criteria.

Features

Interview rooms at the pilot site

- Résumé analysis against each position's competency model
- Spoken interviews with follow-up questions
- A report for the recruiter after every interview
- A chatbot that helps applicants improve their résumé
